

National Grid is commencing its program of tree-by-tree hazard assessment for the some of its main distribution lines in Marlborough. City-owned trees that are hazardous and/or prone to failure, pose a threat to public safety or endanger the reliability of the main distribution lines along these routes, have been identified for removal or pruning in an effort to reduce or eliminate their risk of failure.

Please see the attached map link for the areas that have been identified by National Grid for pruning or removal of trees.

If you have further questions about this process or how it may affect you or your property, please contact the city's Tree Warden at 508-624-6910 Ext: 7601.
